

New cleaner: FLC 900 Clean with H1 approval for technical surfaces

One must comply with the applicable hygiene regulations, you must solve stubborn dirt from machines and systems completely and this must be done in a brief time.

None of the conventional cleaning products for the food industry currently can combine these harsh conditions.

For companies, this means a considerable effort and excessive costs. The solution from the lubricant specialists LUBRAL and ELKALUB is called FLC 900 Clean and is an innovative and new cleaning spray. The unique feature is that the cleaner has NSF-H1 approval and can be used in the food industry, even if direct product contact cannot be completely excluded.

This is an important criterion for manufacturers, Eg for companies such as ALPI-Milchverarbeitungs und Handels GmbH & Co. KG, Berglandmilch eGen in Klagenfurt and Wörgl in Austria, as well as F & T Dichtungstechnik GmbH, who already successfully use the new LUBRAL and ELKALUB product. FLC 900 Clean is suitable for cleaning a variety of technical surfaces such as metal, plastic, glass. This means that the cleaner, which is free of CHC, CFC, AOX and silicone, can be used well recommended to remove fatty deposits. This leaves a bare and grease-free surface. (SDG)

FLC 900 Clean with H1 AUTHORIZATION

The cleaner is at the same time the first product in the new packaging design, which is successively implemented for all LUBRAL and ELKALUB products.
