

**Product Description**  
**ELKALUB FLC 1070**  
**EP Oil Spray**

**FLC 1070** is our highly loadable lubricating concentrate LA 7 (ISO VG 320, four ball test-value 3093 N/mm<sup>2</sup> (800 N/10 min) in the form of an aerosol.

**FLC 1070** is oxidation resistant, dirt dissolving, chemically neutral, does not resinify and protects from corrosion.

The product's high creeping ability guarantees that the lubricating film is also formed at the inner friction surfaces endangered by wear (chains, joints, slideways, plain bearings, etc.).

The excellent additivation of **FLC 1070** protects the friction surfaces from high wear.

The temperature range recommended is between -10° C and +120° C.

Note: For very narrow lubricating gaps or very big depths of penetration we recommend to use our spray FLC 1010 which has been used successfully for many years.

**FLC 1070** is also available in liquid form.
