

## Product Description

### ELKALUB FLC 8

#### Chain Spray

**FLC 8** is a spray, which is based upon our successful special lubricant LA 8/LA 8 P. The product does not contain any additives of solid particles.

**FLC 8** leaves a lubricating film with E.P. and boundary lubrication properties, has a good creeping ability and protects against corrosion. Up to +80° C, **FLC 8** is very adhesive and resistant to centrifugal forces.

The lubricating film is very pressure resistant.

**FLC 8** has shown good results as a special lubricant for highly loaded chains (also in the open air). The product is also used for the lubrication of **open gear wheels, cams, cam plates and spindles**.

Because of the high adhesion of **FLC 8**, the product is not recommended for long guiderails, which need an easy start.

**FLC 8** has antinoise qualities.

The temperature range recommended is between -20° C and +120° C.
