

## Product Description

### ELKALUB FLC 1010

#### Chain Spray

**FLC 1010** is an oil spray without additives of solid particles based upon our E.P. lubricating concentrate LA 1.

**FLC 1010** is resistant to aging, chemically neutral, dirt dissolving, protects against corrosion and goes underneath water.

After spraying on the parts to be lubricated, there remains only a very thin, transparent and adhesive film. This extremely creeping special lubricant guarantees, that the lubricating film is also formed in very narrow fits where it lubricates reliably.

Slightly rusty or coked parts become mobile again and can be loosened.

Although **FLC 1010** creeps well into fits, the creeping ability on surfaces is unimportant. This is of advantage e.g. for **grippers** and **transport chains**.

Compared with other oil sprays, **FLC 1010** does hardly take dust or dirt, so that the danger of an abrasive effect is strongly reduced.

The temperature range recommended is between -20° C and +120° C.
