

Product Description
ELKALUB FLC 675 R+S
Chain cleaning agent

FLC 675 R+S is a thin special product for the cleaning of encrustations and deposits of lubricants in machine parts, gears and lubricant-containing construction parts. In many cases the parts need not be dismantled. **FLC 675 R+S** leaves a very thin film on the cleaned parts, which is, however, very adhesive and resistant to pressure.. This film protects and lubricates the chain until final lubrication becomes effective.

FLC 675 R+S is preferably used for the lubrication of chains (prescribed by MAN Roland for the sheetfed printing presses) and also for power units, which are to be repaired.

The cleaning agent is available as an aerosol and in liquid form.
